

VATS

VATS

Peštan company for many years manufactures polyethylene vats for liquids or bulk materials in agriculture and household. Vats , in addition to the water you can use in the production of wines and rakija as well as other household purposes in accordance with the chemical resistance of materials and at room temperature. In case you have need for storing liquids at elevated temperatures or concentrated chemicals please consult the manufacturer

PESTAN VATS ARE MANUFACTURED IN FOLLOWING VOLUMES:

- 100 l vat without cover
- 200 l vat with optional cover
- 500 l vat with optional cover
- 1000l vat without cover. Vats are standardly made in dark green color.

Peštan plastic vats are made of high density polyethylene. They are intended for the storage of liquids and bulk materials in accordance with the chemical resistance of materials. Although polyethylene is resistant to virtually all chemical influences, we ask customers that in the event of industrial applications, storage of concentrated chemicals and storing liquids at elevated temperatures should consult the manufacturer. Also it is very important before first use to make appropriate set up and levelate vat. Since the vat in operation carries very heavy load incorrect installation can result in breakage and emphasizing liquids.

#### THE DIMENSIONS OF THE VAT:

- 200 l - height 79 cm diameter 68 cm
- 500 l - height 90 cm diameter 101 cm
- 1000 l - height 96 cm diameter 134 cm

For vats 200 l and 500 l have to offer and the appropriate covers.

PEŠTAN creates eco friendly products designed to have the less possible impact on surroundings in all aspects of its life cycle, establishing independent eco standards (standards for environmentally friendly products) for each product
